

“MAKING TOMORROW’S DOCTORS SAFER”

Friday 28 January 2011

Providing students with the resources to ensure the safety of their patients and educating them to become effective risk managers is vital to their future careers; indeed this is a key requirement of the 2009 Tomorrow’s Doctors.

Medical Schools across the United Kingdom have adopted a number of different approaches to this goal, inspired in part by the "WHO Patient safety: Curriculum Guide for Medical Schools".

Amongst others, The Centre of Risk at Barts and The London has successfully created an innovative teaching programme which students complete during their MBBS Degree.

We invite you to attend a conference to discuss issues related to the teaching of patient safety and risk management in the undergraduate curriculum. The goal of the meeting is to provide a forum to share ideas with view to developing a national undergraduate teaching curriculum which equips students to recognise risk and manage it sensibly, responsibly and proportionately - abilities which they carry through to their foundation years training and beyond.

The one day conference will comprise key note lectures from speakers including Charles Vincent and other specialists in the field; there will be an open forum to discuss thoughts and ideas as well as a poster and demonstration session highlighting good practice in this important area. The meeting is free and sponsored by an academic award from HEFCE

If you would like to attend please contact [Send Email](#)
